Automatically update apps in real time, install temporary installations, download and launch full installation packages and so much more! The file was easy to install and worked fine when I installed the trial version. I downloaded the trial version and

immediately began using it. The trial version came with a lot of features. It let me run a complete scan on the network for all programs installed. I was excited to see that it was trial version so I looked into the full version. I was disappointed to see that it had all of the same features that came with the trial version. I emailed them about the missing features and they told me that the full version has a 3 year subscription. Well I was \$30 in the hole at that point. I removed the program and it took a little longer to uninstall than to install. I'm not sure if you can use a trial version for 3 years, but I'm still having the same problems with the full version. I can see all of the programs installed on my computer. I'm able to download them individually, but nothing comes up when I click the link for the full version programs. I can manually download them, but if I have an update for any of them it is not downloading it to the full version. I have reset the registry and had no success. I'm hoping that by mailing them and letting them know about the problem I might get a refund on the full version.

Since you are running a free program, I really feel that the program should work. Just give me the option to see full versions of apps that I want. Thank you for your time.
